

GCSE Maths: Finding the equation of a straight line (Foundation): answers

GCSE Maths - Straight-Line Graphs and Coordinates - Foundation - Lesson 12.6

Answers. Final answers to the worksheet questions. Full step-by-step solutions for every question are free at websink.site/gcse/maths/ch12-straight-line-graphs-coordinates/foundation/finding-the-equation-of-a-straight-line/

Exercise 12G Equations of lines from graphs Non-calculator

- 1 Find the equation of the line.

Answer: $y = x + 2$

- 2 Find the equation of the line.

Answer: $y = 2x - 1$

3 Find the equation of the line.

Answer: $y = -x + 3$

4 Find the equation of the line.

Answer: $y = -2x + 4$

5 Find the equation of the line.

Answer: $y = \frac{1}{2}x + 1$

6 Find the equation of the line.

Answer: $y = -\frac{1}{2}x - 2$

7 Find the equation of the line.

Answer: $y = 3x - 4$

8 Find the equation of the line.

Answer: $y = \frac{1}{3}x - 1$

9 Write down the equations of the two lines A and B.

(a) line A

Answer: $x = 3$

(b) line B

Answer: $y = -2$

10 The grid shows two lines, L and M.

- (a) Find the equation of line L.

Answer: $y = x + 1$

- (b) Find the equation of line M.

Answer: $y = x - 2$

- (c) What do you notice about the two equations? What does this tell you about the lines?

Answer: Both have gradient 1, so L and M are parallel.

- 11 The line in the diagram is the boundary of a fence on a map. Write down its equation in the form $y = mx + c$.

Answer: $y = -2x + 3$

- 12** A line passes through (0, 3) and (4, -1). Without calculating, explain how you can tell the gradient is negative.

Answer: The line goes down from left to right

Exercise 12H Equations of lines from points and gradients Non-calculator

- 1** Find the equation of the line with the given gradient that passes through the given point.

- (a) gradient 2, point (1, 5)

Answer: $y = 2x + 3$

- (b) gradient -1, point (3, 4)

Answer: $y = -x + 7$

- (c) gradient 3, point (-2, -1)

Answer: $y = 3x + 5$

- (d) gradient $\frac{1}{2}$, point (4, 3)

Answer: $y = \frac{1}{2}x + 1$

- 2** Find the equation of the line through each pair of points.

- (a) (0, 1) and (2, 5)

Answer: $y = 2x + 1$

- (b) (1, 2) and (3, 8)

Answer: $y = 3x - 1$

- (c) (0, 5) and (5, 0)

Answer: $y = -x + 5$

- (d) (-1, -3) and (3, 5)

Answer: $y = 2x - 1$

- 3** A line goes through (0, 2) and (3, 8). The first point is on the y-axis, so $c = 2$. Find the gradient and the equation of the line.

Answer: $m = 2, y = 2x + 2$

- 4** Find the equation of the line through each pair of points. The gradient may be a fraction.

- (a) (2, 1) and (6, 3)

Answer: $y = \frac{1}{2}x$

- (b) (-3, -2) and (3, 2)

Answer: $y = \frac{2}{3}x$

(c) (0, -3) and (6, 1)

Answer: $y = \frac{2}{3}x - 3$

(d) (-2, 4) and (4, -5)

Answer: $y = -\frac{3}{2}x + 1$

5 Find the equation of the line through each pair of points.

(a) (0, 3) and (2, 7)

Answer: $y = 2x + 3$

(b) (1, 0) and (3, 4)

Answer: $y = 2x - 2$

6 A line passes through (1, 1) and (3, 5). Does it pass through the point (5, 9)? Show your working.

Answer: Yes

7 A line passes through (-1, -7) and (3, 5). Find its equation and then the value of y when $x = 10$.

Answer: $y = 3x - 4$; $y = 26$

8 Pete finds the equation of the line through (1, 3) and (3, 7). He gets $m = 2$ and writes $y = 2x + 3$. Show that he is wrong and find the correct equation.

Answer: $y = 2x + 1$
