

GCSE Maths: The sine rule (Higher): worksheet

GCSE Maths - Pythagoras and Trigonometry - Higher - Lesson 20.8

Name: _____

Date: _____

Score: _____

11 questions. Write your answers in the spaces. Answers and step-by-step help are free at websink.site/gcse/maths/ch20-pythagoras-trigonometry/higher/the-sine-rule/

Exercise 20J The sine rule Calculator allowed

- 1 Work out the length of the side marked x in each triangle. Give your answers correct to 1 decimal place. All lengths are in centimetres.

(a)

Answer: _____

(b)

Answer: _____

(c)

Answer: _____

(d)

Answer:

- 2** Work out the length of the side marked x in each triangle. You will need to find a third angle first. Give your answers correct to 1 decimal place. All lengths are in centimetres.

(a)

Answer:

(b)

Answer:

(c)

Answer:

- 3** Work out the size of the angle marked x in each triangle. Each angle x is acute. Give your answers correct to 1 decimal place. All lengths are in centimetres.

(a)

Answer:

(b)

Answer:

(c)

Answer:

- 4 A and B are two points 200 m apart on a straight shore. A boat is at C. The angle CAB is 52° and the angle CBA is 71° . Work out the distance AC from the boat to A, correct to 1 decimal place.

Answer:

- 5 A triangular sail has angles of 55° and 62° . The side opposite the 55° angle is 3.2 m long. Work out the length of the side opposite the 62° angle, correct to 2 decimal places.

Answer:

- 6 Two angles of a triangle are 38° and 79° . The shortest side is 6.1 cm long. Work out the length of the longest side of the triangle, correct to 1 decimal place.

Answer:

- 7 B is 500 m due east of A. The bearing of a tower T from A is 035° and the bearing of T from B is 310° . Work out the distance AT, correct to 1 decimal place.

Answer:

- 8 In triangle ABC, angle A = 35° , BC = 5 cm and AC = 8 cm . Show that there are **two** possible triangles by working out both possible sizes of angle B, correct to 1 decimal place.

Answer:

- 9 Riya wants to find the side marked ? in this triangle using the sine rule. Explain why she cannot start with the sine rule, and say which rule she should use.

Answer:

- 10 In triangle ABC the angles at A and B are equal. Use the sine rule to show that $a = b$.

Answer:

- 11 **Challenge.** In triangle ABC, $a = 12$ cm, angle B = 40° and angle C = 75° . Work out (a) the length of b , (b) the length of c , (c) the perimeter of the triangle. Give each answer correct to 1 decimal place.

(a) b

Answer: _____

(b) c

Answer: _____

(c) perimeter

Answer: _____
