

GCSE Maths: Ruler and compass constructions (Foundation): worksheet

GCSE Maths - Loci, Bearings and Vectors - Foundation - Lesson 22.2

Name: _____

Date: _____

Score: _____

9 questions. Write your answers in the spaces. Answers and step-by-step help are free at websink.site/gcse/maths/ch22-constructions-loci-bearings-vectors/foundation/ruler-and-compass-constructions/

Exercise 22C Constructions: method and accuracy Non-calculator

1 Put the steps in the correct order. Write the letters.

- (a) Constructing the perpendicular bisector of AB:
- A Keep the same radius, put the point on B and draw arcs that cross the first two.
 - B Draw the line AB with a ruler.
 - C Join the two crossing points with a ruler.
 - D Open the compasses to more than half the length of AB.
 - E Put the compass point on A and draw an arc above and below AB.

Answer: _____

- (b) Bisecting an angle:
- A Keep the same radius and draw an arc from the second crossing so that the arcs cross.
 - B Put the compass point on the corner O and draw an arc that crosses both arms.
 - C Draw a straight line from O through the point where the arcs cross.
 - D Put the point on the first crossing and draw an arc inside the angle.

Answer: _____

2 Fill in each gap.

- (a) The perpendicular bisector of AB meets AB at an angle of ____ degrees.

Answer: _____

- (b) The perpendicular bisector of AB cuts AB into two ____ parts.

Answer: _____

- (c) When you bisect an angle, the first arc is drawn with the compass point on the ____ of the angle.

Answer: _____

- (d) You must never ____ out the construction arcs.

Answer: _____

3 Draw a line AB that is 8 cm long. Construct the perpendicular bisector of AB. Mark the midpoint M. What is the length AM?

Answer: _____

4 Construct the bisector of each angle. State the size of each of the two equal angles.

- (a) An angle of 50°

Answer: _____

- (b) An angle of 80°

Answer: _____

(c) An angle of 120°

Answer:

(d) An angle of 140°

Answer:

5 Describe how to construct each angle using only a ruler and compasses. What does the angle measure when you check it with a protractor?

(a) An angle of 60°

Answer:

(b) An angle of 120°

Answer:

(c) An angle of 45°

Answer:

(d) An angle of 90°

Answer:

6 Each diagram is drawn actual size. Construct the perpendicular from P to the line, then measure the shortest distance from P to the line.

(a)

Answer:

(b)

Answer:

7 Aisha rubs out her construction arcs after she has drawn a perpendicular bisector. She says: "The line is right, so the arcs are not needed." Explain why she should leave the arcs on her work.

Answer:

8 A straight path runs along a line. A point P is on the path. Construct the perpendicular to the path at P. Q is the point on this perpendicular that is 4 cm from P. The point A is on the path 3 cm from P. Work out the distance AQ.

Answer:

- 9** Explain why the perpendicular distance from a point P to a line is shorter than the distance from P to any other point on the line. Use P that is 3 cm from the line and a point X on the line that is 4 cm along from the foot of the perpendicular.

Answer:
