

GCSE Maths: The angle at the centre (Higher): worksheet

GCSE Maths - Circle Theorems - Higher - Lesson 26.3

Name: _____

Date: _____

Score: _____

22 questions. Write your answers in the spaces. Answers and step-by-step help are free at websink.site/gcse/maths/ch26-circle-theorems/higher/the-angle-at-the-centre/

Exercise 26C The angle at the centre Non-calculator

- 1 A , B and C are points on a circle with centre O . Angle $ACB = 35^\circ$. Work out the size of angle AOB . Give a reason for your answer.

Answer:

- 2 A , B and C are points on a circle with centre O . Angle $ACB = 55^\circ$. Work out the size of angle AOB . Give a reason for your answer.

Answer:

- 3 A , B and C are points on a circle with centre O . Angle $ACB = 26^\circ$. Work out the size of angle AOB . Give a reason for your answer.

Answer:

- 4** A , B and C are points on a circle with centre O . Angle $AOB = 90^\circ$. Work out the size of angle ACB . Give a reason for your answer.

Answer:

- 5** A , B and C are points on a circle with centre O . Angle $AOB = 124^\circ$. Work out the size of angle ACB . Give a reason for your answer.

Answer:

- 6** A , B and C are points on a circle with centre O . Angle $AOB = 66^\circ$. Work out the size of angle ACB . Give a reason for your answer.

Answer:

- 7** A , B and C are points on a circle with centre O . Angle $ACB = 38^\circ$. Work out the size of angle OAB . Give a reason for each step.

Answer:

- 8 A , B and C are points on a circle with centre O . Angle $ACB = 60^\circ$. Work out the size of angle OAB . Give a reason for each step.

Answer:

- 9 A , B and C are points on a circle with centre O . Angle $ACB = 32^\circ$. Work out the size of angle OAB . Give a reason for each step.

Answer:

- 10** A, B and C are points on a circle with centre O . Angle $OAB = 60^\circ$. Work out the size of angle ACB . Give a reason for each step.

Answer:

- 11** A, B and C are points on a circle with centre O . Angle $OAB = 50^\circ$. Work out the size of angle ACB . Give a reason for each step.

Answer:

- 12** A , B and C are points on a circle with centre O . C lies on the **minor** arc AB . Angle $AOB = 100^\circ$. Work out the size of angle ACB . Give a reason for each step.

Answer:

- 13** A , B and C are points on a circle with centre O . C lies on the **minor** arc AB . Angle $AOB = 130^\circ$. Work out the size of angle ACB . Give a reason for each step.

Answer:

- 14** A , B and C are points on a circle with centre O . C lies on the **minor** arc AB . Angle $AOB = 160^\circ$. Work out the size of angle ACB . Give a reason for each step.

Answer:

- 15** AB is a diameter of a circle with centre O . C is a point on the circle. Angle $CAB = 28^\circ$. Work out the size of angle COB .

Answer:

- 16** AB is a diameter of a circle with centre O . C is a point on the circle. Angle $CAB = 41^\circ$. Work out the size of angle COB .

Answer:

- 17** A , B and C are points on a circle with centre O . Angle $AOB = (4x + 32)^\circ$ and angle $ACB = (3x + 7)^\circ$.

- (a)** Work out the value of x .

Answer:

- (b)** Work out the size of angle ACB .

Answer:

- 18** A , B and C are points on a circle with centre O . Angle $AOB = (3x + 5)^\circ$ and angle $ACB = (x + 10)^\circ$.

- (a) Work out the value of x .

Answer:

- (b) Work out the size of angle ACB .

Answer:

- 19 The 12 and the 4 on a circular clock face are joined to the centre O . Each hour mark is 30° round the centre. A is the 12, B is the 4 and C is the 9, all on the edge of the clock. Work out angle ACB . Give a reason.

Answer:

- 20 Ben says: "The angle at the centre is 50° , so the angle at the circumference is 100° ." Explain his mistake and give the correct answer.

Answer:

- 21 A , B and C are on a circle with centre O . Angle $ACB = x$. Show that angle $OAB = 90^\circ - x$.

Answer:

- 22 A and B are the ends of a diameter of a circle with centre O . Use the angle at the centre theorem to show that the angle in a semicircle is 90° .

Answer:
